Beam Input

#### **Features**

This software is for torsional analysis of open section thin-walled beams with finite element method

Considering spans, heights of beams, and loading locations, the software meshes beams to elements automatically

Provide results of twist angle, twist rate

Provide results of pure shear stress, warping shear stress, warping normal stress at specified location

#### **Notes**

Units: torque and moment kN.m (in. kips), <u>Bi-moment</u>: kN.m<sup>2</sup> (in.<sup>2</sup>. kips)

Torque direction: with right hand rule, counter-clockwise is positive

All inputs	can be transferre	d to other unit auton	natically			

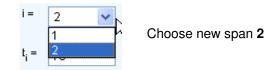

# 2. Input of Spans

Span	IS				
i =	1 💌	S <sub>i</sub> = 3800	mm d <sub>i</sub> = 310	) mm b <sub>i</sub>	= 254 mm
t <sub>i</sub> =	19 mm	w <sub>i</sub> = 8	mm Add	d 🗸	Edit
i	S <sub>i</sub> (mm)	d <sub>i</sub> (mm)	b <sub>i</sub> (mm)	t <sub>i</sub> (mm)	w <sub>i</sub> (mm)
1	5000	310	254	19	9

# Add One Span

*
1
Ň

Select Add from the list

Input S<sub>i</sub>, d<sub>i</sub>, b<sub>i</sub>, t<sub>i</sub>, w<sub>i</sub> as required

click button Edit, you can add new span 2

## Delete One Span

Spar	IS				
i =	1 💙				
				Add 💌	Edit
				Delete 📐	
i	S <sub>i</sub>	d <sub>i</sub>		Update 1	w
	(mm)	(mm)	(mm)	(mm)	(mm)
1	5000	310	254	19	9

Select Delete from the list

Click button **Edit**, you can delete span 2, You couldn't delete span 1, but you can update input for span 1

# Update One Span

Span	IS				
i =	1 💌	S <sub>i</sub> = 5000	mm d <sub>i</sub> = 310	) mm k	p <sub>i</sub> = 254 mm
t <sub>i</sub> =	19 mm	w <sub>i</sub> = 9	mm Up Add Del		Edit
i	S <sub>i</sub>	d <sub>i</sub> (mm)		date (mm)	W <sub>i</sub>
1	(mm) 3800	(mm) 310	(mm) 254	19	(mm) 8
2	5000	310	254	19	9

Select **Update** from the list

Input S<sub>i</sub>, d<sub>i</sub>, b<sub>i</sub>, t<sub>i</sub>, w<sub>i</sub> as required

click button Edit, you can update input for span 1

# 3. Input of Loading

Add One Load

Loadin	9		
i =	3 🗸	# of Span	2 💌
Туре	Point 💌	T <sub>q</sub> =	-12 kN.m
× <sub>b</sub> =	500	mm	
	Add	~	Edit
	\dd	- K	
	)elete Jpdate		

## Select Add from the list

i = [	3 🗸	Choose loading	) number as 3	
# of Span	2 🗸	set loading or	ı span 2	
Туре	Uniforn 🗸 Point	T <sub>q</sub> =	-12	kN.m/m
× <sub>b</sub> =	Uniform	mm × <sub>d</sub> =	1000	mm

Select loading as Uniform

Input  $T_q, \, x_b, \, x_d$  as required

Click button Edit, you can add one load

## Delete One Load

Loading		
i = 2	*	
Delete	*	Edit
Add		
Delete Update	2	

Select **Delete** from the list

i = 2 v choose loading number of 2

click button Edit, you can delete loading number of 2

You couldn't delete loading number of 1, but you can update input for loading number of 1

### Update One Load

Loading		
i = 1	/ # of Span	2 💌
Type Point	T <sub>q</sub> =	5 kN.m/m
× <sub>b</sub> = 4000	mm	
Add	*	Edit
Add Delete		
Update		

Select Update from the list

¥

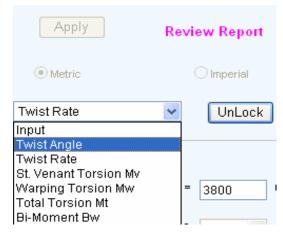

Choose loading number of 1

You can change information for # of span, Loading Type,  $T_q$ ,  $x_b$ ,  $x_d$  as required Click button **Edit**, you can update input for the selected load

#### 4. Review Results

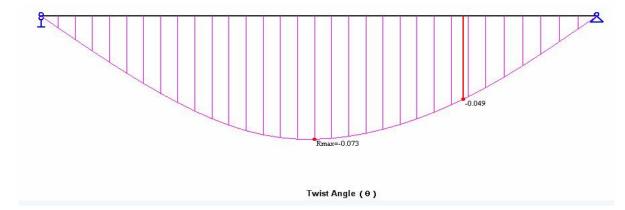

Click botton Apply

## Result for Twist Angle (θ)

# Select Twist Angle from the list

you can get envelope for rotation as following

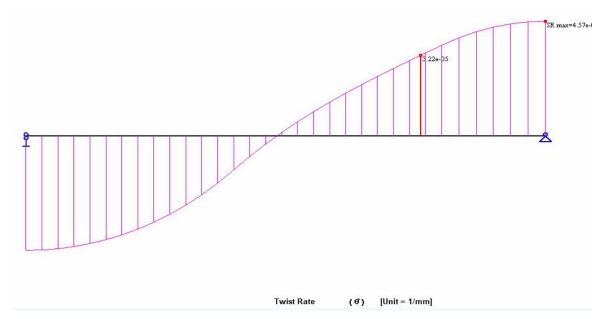

# Result for Twist Rate (θ')

Apply	Review Report
Metric	OImperial
Twist Angle	VnLock
Input Twist Angle	
Twist Rate	
St. Venant Torsion Mv	
Warping Torsion Mw	= 3800
Total Torsion Mt	
Bi-Moment Bw	

#### Select Twist Rate from the list

you can get envelope for slope of rotation as following

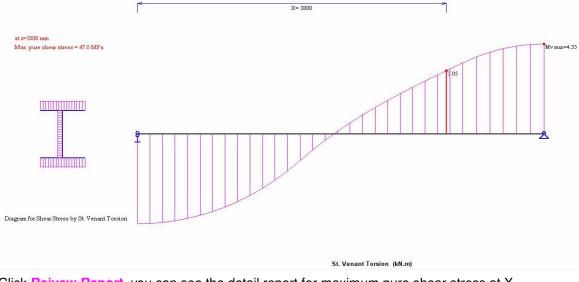

#### Result for St. Venant Torsion Mv

Apply	Review Report
Metric	OImperial
Twist Angle	UnLock
Input Twist Angle Twist Rate	
St. Venant Torsion Mv Warping Torsion Mw Total Torsion Mt Bi-Moment Bw	= 3800 '

#### Select St. Venant Torsion Mv from the list

you can get envelope for St. Venant torsion and diagram for pure shear stress at location X

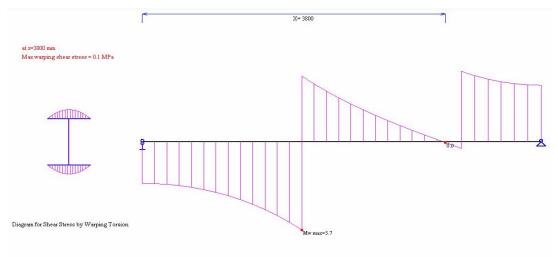

Click Reivew Report, you can see the detail report for maximum pure shear stress at X

#### **Result for Warping Torsion Mw**

Apply	Review Report		
<ul> <li>Metric</li> </ul>	O Imperial		
Warping Torsion Mw	UnLock		
Input Twist Angle Twist Rate St. Venant Torsion Mv			
Warping Torsion Mw Total Torsion Mt Bi-Moment Bw	= 3800		

## Select Warping Torsion Mw from the list

you can get envelope for warping torsion and diagram for warping shear stress at location X

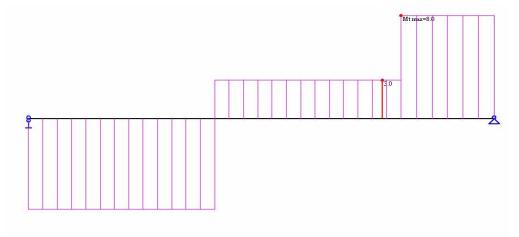

Warping Torsion Mw (kN.m)

Click Reivew Report, you can see the detail report for maximum warping shear stress at X

# Result for Total Torsion Mt

	Apply	eview Report				
	<ul> <li>Metric</li> </ul>	(	Imperial			
	Warping Torsion Mw 🛛 😽		UnLock			
	Input	1				
	Twist Angle					
	Twist Rate					
	St. Venant Torsion Mv					
	Warping Torsion Mw	=	3800			
	Total Torsion Mt					
	Bi-Moment Bw					
et Total Torsion Mt from the list						

Select **Total Torsion Mt** from the list you can get envelope for total torsion

Total Torsion Mt (kN.m)

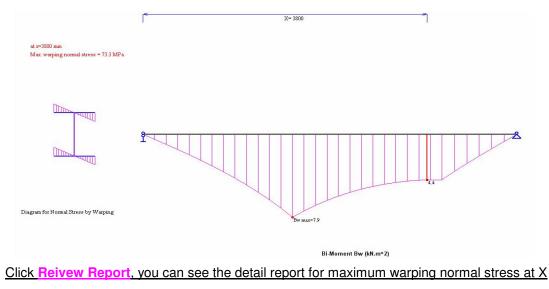

This torsion will apply for beam end connection design

#### **Result for Bi-Moment Bw**

#### Select Bi-Moment Bw from the list

you can get envelope for bi-moment and diagram for warping normal stress at location X

click button UnLock, results are discarded, go back to input page

#### Theory for Torsional Analysis of Open Section Thin-Walled Members

**Element Torsional Stiffness Matrix** 

$$\left( \begin{array}{c} M_{ti} \\ B_{\omega i} \\ M_{tj} \\ B_{\omega j} \end{array} \right) \quad .= \left( \begin{array}{cccc} 2 \, i_\omega \, \gamma \, /L^2 & 2 \, i_\omega \, (\alpha + \beta)/L & -2 \, i_\omega \, \gamma \, /L^2 & 2 \, i_\omega \, (\alpha + \beta)/L \\ 2 \, i_\omega \, (\alpha + \beta)/L & 2 \, i_\omega \, \alpha & -2 \, i_\omega \, (\alpha + \beta)/L & 2 \, i_\omega \, \beta \\ -2 \, i_\omega \, \gamma \, /L^2 & -2 \, i_\omega \, (\alpha + \beta)/L & 2 \, i_\omega \, \gamma \, /L^2 & -2 \, i_\omega \, (\alpha + \beta)/L \\ 2 \, i_\omega \, (\alpha + \beta)/L & 2 \, i_\omega \, \beta & -2 \, i_\omega \, (\alpha + \beta)/L & 2 \, i_\omega \, \alpha \end{array} \right) \left( \begin{array}{c} \theta_i \\ \theta_i' \\ \theta_j \\ \theta_j \end{array} \right)$$

$M_{ti}, M_{tj}$	=	Total torsion at points i and j	$M_t = M_v + M_\omega$
M <sub>v</sub>	=	St. Venant (pure) torsion	
$M_\omega$	=	Warping torsion	
$B_{\omega i},B_{\omega j}$	=	Bi-moment at points i and j	

$\theta_i, \; \theta_j$	=	Twist angle at points i and j	

 $\dot{\theta_{i}}, \dot{\theta_{j}} = T$  wist rate (or first derivative of twist angle) at points i and j

$$\begin{split} i_{\omega} &= \mathsf{E}_{0} \,.\, J_{\omega} \,/\, \mathsf{L} \\ \alpha &= \kappa. \left( \kappa - \mathsf{th}\kappa \right) / \left\{ 2 \, \mathsf{th}\kappa \,.\, \left[ \kappa - 2 \, \mathsf{th}(\kappa/2) \right] \right\} \\ \beta &= \kappa \left( \mathsf{sh}\kappa - \kappa \right) / \left\{ 2 \, \mathsf{sh}\kappa \,.\, \left[ \kappa - 2 \, \mathsf{th}(\kappa/2) \right] \right\} \\ \alpha &+ \beta &= \kappa^{2} \,. \mathsf{th}(\kappa/2) \,/ \left\{ 2 \left[ \kappa - 2 \, \mathsf{th}(\kappa/2) \right] \right\} \\ \gamma &= \kappa^{3} \,/ \left\{ 2 \left[ \kappa - 2 \, \mathsf{th}(\kappa/2) \right] \right\} \end{split}$$

		$\kappa = \left[ \begin{array}{c} G \; J_{d} \; L^2 \; / \; (E_1 \; . \; J_{\omega}) \right]^{0.5}$	$E_1 = E_0 / (1 - u^2)$	$G = E_0 / [2(1 + u)]$
J <sub>d</sub> J <sub>ω</sub>	=	St. Venant torsional constant Warping torsional constant		
		$M_v = G. \ J_d. \ \theta'$		
		$M_{\omega} = M_t - M_v$		
Pure torsional shear stress		$\tau = M_v \ .t \ / \ J_d$		
Warping shear stress		$\tau = M_{\omega} \ .S_{\omega} \ / \ (J_{\omega} \ . \ t)$		
Warping normal stress		$\sigma = B_{\omega} \; \omega \; / \; J_{\omega}$		
		for $\omega(\mbox{sectorial area})$ and $S_{\omega}(\mbox{sectorial area})$	ctorial moment), see d	etail report
